

Locality baseline

SOUTH BARNSELEY

Purpose

The locality profiles have been produced to –

- Support shared understanding of the health and care needs and experiences of local people
- Provide insights into how people are currently using health services and their outcomes
- Help to identify opportunities for collaborative working within and across localities

The current profiles are a first attempt to provide meaningful and useful information to inform local planning and delivery. Please tell us how they can be improved.

Limitations

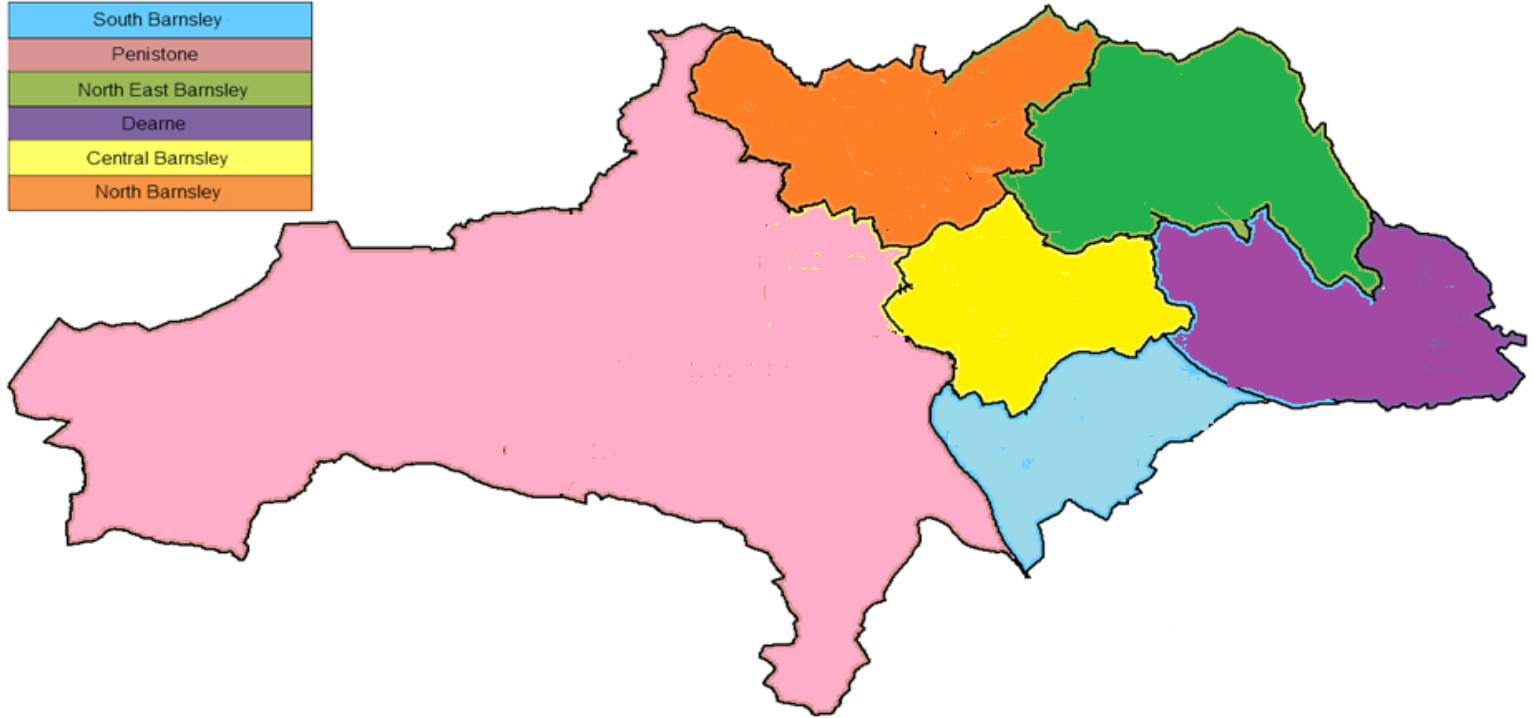

- The primary and community care localities are not fully aligned to the local authority area council geographies. For example in Dodworth and Old Town, the main GP providers are part of the Penistone locality whereas the council wards are part of the Central Barnsley area council. Public health data, for example rates of obesity and smoking, is based on council wards whereas the disease prevalence data (QOF) and hospital episode data (SUS) is based on GP registered lists.

Key for tables			
<i>Highlighted</i>	Data based on local authority population	<i>Not highlighted</i>	Data based on GP registered list

- Patient level data is not matched across different health and care providers so provides limited information around how patients use and move through the system as a whole
